Description

Electrical pump for removing water out of decontamination showers for example, suitable for continuous operation. It can deliver fresh water as well as waste water with a maximum solid size of 4mm.

The suction pump has a water level sensor with leaves only a rest water level of 2mm. It comes with a 10m cable and is mounted together with the sensor in a stainless steel box, which securely prevents the intake of bigger pieces as well as suctioning to the bottom. The standard coupling is a Storz D, but any other coupling is available on request.
